# ABOUT US

“ We have live electrical safety updates, inspections, reports, action defects, plans & drawings all in one place, it can be this simple! ”

Shark Electrical Safety Management Software makes it easy to report, track and supervise electrical safety on-site.

It is designed to remove the inconveniences of tracking and reporting on-site electrical safety, giving you an unmatched level of communication as well as the compliance of your facilities with EAWR 1989 and PUWER 1998.

# KEY FEATURES

The cloud based software consists of four dashboards for different user groups: Site Level, Area Level, National Level and Business Level.

The Site Level Dashboard is accessible to managers and supervisors using any internet browser.

-  Simple online ESMS dashboard
-  Automatic specification updates
-  View, filter, and sign off completed action defects
-  Managers Guidance
-  Electronic Reports and Inspection Reminders
-  Authorisation Documents
-  Visual representation of historic action defects

**The Area Level Dashboard provides an area manager with a detailed overview of all Site Level Dashboards.**

**The National Level Dashboard provides a clear overview of all your Area Level Dashboards.**

**The Business Level Dashboard provides national engineers access to all sectors of the business**

The Engineers Mobile view allows electrical staff to carry out inspections electronically and upload action defects with photographic evidence to the site level dashboard instantly.

The software also has:

- Traffic Light System, which outlines reports for a quick and easy view
- Automated Emails for immediate Urgent Code 1 action defects and a weekly summary of site ESMS status
- Notification and reminders for inspections, meaning overall safer depots through visibility
- View, filter and sign off actions defects
- View reports
- View plant schematic drawings, for breakdown assistance

## Solving Problems with Long Term Solutions

The main problem with the current ESMS system that is in place on most sites, is that it involves paper - and a lot of it.

- Navigating the ESMS folders, is now replaced with our user friendly, cloud based site, with dashboards covering all parts of site ESMS.
- Going paperless also means there's no loss or damage of paperwork if inspections need to be conducted in wet or windy conditions.
- You can access your ESMS folder from anywhere in the world for live updates.
- Eradicate out-of-hours Code 1 defect reports with instant automated email notifications.
- Reminders of weekly and monthly summaries and any outstanding defects.
- No more writing up inspections with instant delivery of a completed report from the engineers as soon as it's completed.
- Instant ESMS updates from administrators.
- Mobile access for electricians to sign off on site
- Force engineers to complete all assets & locations before completing a report.

# OTHER BENEFITS

## Health and Safety

Immediate reporting of dangerous defects guarantees that the site management are always aware.

## Visibility & Accessibility

Which allows employees to login from anywhere in the world and for electronic reports from site to be automatically uploaded to the site dashboard.

## Compliance

Allows you to carry out auditing off site and be able to view an extensive maintenance backlog.

## Environmental

Paper and print free, saving an estimated 1,000,000 sheets in the business p/a and it also reduces your company fuel usage.

## Financial

Provides efficiency and utilisation of electrical staff and savings for employees and contractors.

## Saving Time, Money, & Improving Compliance

With an estimated 200 hours saved per year per depot, an estimated one million sheets of paper saved, as well as fuel costs being slashed with off-site auditing, Shark ESMS is the most efficient and easily navigated solution for your company it can help:

- Managers & Supervisors
- Area & Health & Safety Managers
- Regional Electrical Engineers
- Electrical Managers
- Maintenance Electricians
- Inspection Engineers
